

## **How to switch programs on the XDS Pro using Serial Commands**

Every Program transmitted via the XDS satellite system is associated with a Program ID that identifies the program to the receiver. Individual programs may be selected to the receiver's output ports by issuing serial ID commands via the M&C (Console) Port on the back of the receiver, thereby changing the program that the receiver is decoding.

If a program is selected for decoding using this method that is NOT part of the station's list of authorized programming, it will NOT be decoded. Only programs authorized for the station that the receiver is assigned to can be decoded. Whenever possible, always use the XDS Port Scheduler as your main method of taking a program to ensure you receive the proper content.

You can command the receiver as follows:

- 1) Start a terminal session (using HyperTerminal or equivalent) by connecting to the receiver's M&C (Console) Port. The default settings for this Port are **115200, 8, None, 1**.
- 2) Hit Enter. You should see a "Hudson" prompt.
- 3) Log in by typing **LOGIN(space)TECH(space)(PASSWORD)** (Use your Affiliate NMS (myxdsreceiver.westwoodone.com) password **OR** you can use the receiver's daily password (Setup > Serial # > PWD)).
- 4) Login confirmation will be displayed ('You are logged in as TECH')

Once you are logged in, the command to steer a Port on the receiver to a specific program PID is:

**PORT(space)LIVE,(Port),ID**

Examples:

**PORT LIVE,A,99** – This command will set Port A to Program ID 99 (Mark Levin)

**PORT LIVE,B,18** – This command will set Port B to Program ID 18 (CBS Sports – Jim Rome)

Please refer to the PID table listed below for the Program ID assignments for each program available on the Westwood One XDS receiver.

**IMPORTANT:** Program schedules set in the webbased XDS Program Scheduler will override any manual ID changes.

To change the baud rate on the M&C (Console) Port, do the following:

- 1) Log in to the receiver as described above
- 2) Enter **BAUD(space)(desired baud rate)[ENTER]**

Example: to set the baud to 9600, enter **BAUD 9600 [ENTER]**
